THE ORDER OF PLAY:

- Week 6: Data Curation, Evaluation, Frontier Models
  - Day 1: Curate the data
  - Day 2: Pre-process the Data
  - Day 3: Baseline Model & Traditional ML
  - Day 4: Neural Networks and Frontier LLMs
  - Day 5: Fine-Tuned Frontier LLM
- Week 7: Fine-tune Open-Source LLM
- Week 8: Deployed Model, RAG, Agentic Product.

CAPSTONE

3 Alternative ways to follow

1. Focus on instruction - Watch lectures and see the results recreate the final result.
2. Follow along - Use the Lite version of the dataset (20,000 - 200,000). Don't curate the data - we mine (...)
3. Big Deep - Use the full dataset curate and train fully - Significant work but very satisfying

Finding Datasets

1. Your own proprietary data
2. Kaggle
3. Hugging Face datasets
4. Synthetic data
5. Specialist Companies like Scale.com

- Hugging Face is a Treasure Trove of Data

Digging into the data.

1. Investigate
2. Parse
3. Visualise
4. Assess Data Quality
5. Curate
6. Save

How to evaluate Performance

Types of Metrics

1. Model-Centric or Technical Metrics "Loss" - closely aligned with what is being done with the Model. (e.g. taking parameter and trying again).
2. Business Centric or Outcome Metrics - Actual Difference in Price - The Metrics are mostly closely aligned with the actual Commercial with actual objectives.

Data is typically divided into 3 datasets

- Training Data: - The Majority of Data used to learn pattern to make new predictions.
- Validation Data: (Test Data) - Held out data used to evaluate whether the Model can make new predictions accurately.
- Test Data: - Held out data used at the end of the process to confirm model prediction accuracy.
